

WindWorks Design Introduces a Maintenance Kit for EWI Wind Synths

ROCHESTER, NY, Mar. 16, 2004 – WindWorks Design is pleased to introduce a maintenance kit designed for EWI wind synthesizer controllers.

The *EWI Maintenance Kit* includes alcohol wipes, moisture barriers, a cleaning brush, a screwdriver set, Silicone7 lubricant, and an instruction sheet, all in a handy carrying-case.

Since the mouthpiece is an integral part of a wind controller, maintenance and cleaning is important to keep the instrument in good playing condition. The kit provides the tools to properly maintain, clean and protect an EWI mouthpiece. The included instruction sheet tells how to use the tools and parts supplied in the kit, and provides additional information on adjusting your EWI for your playing comfort.

Professional players will find the kit useful to take along on gigs, keeping spare parts and tools on hand, right when they may be needed most. The carrying case has room to store spare accessories.

Ordering information for the EWI Maintenance Kit is available at <http://WindWorksDesign.com>, on the Music Technology page.
